

PICs Of Project

- **Project Map:**

- **Project in Github:**

[\[Terraform_Project\]](#)

- **Workspace on project:**

```
● [ahmed@localhost Terraform-Project]$ terraform workspace new dev
Created and switched to workspace "dev"!

You're now on a new, empty workspace. Workspaces isolate their state,
so if you run "terraform plan" Terraform will not see any existing state
for this configuration.
● [ahmed@localhost Terraform-Project]$ terraform workspace show
dev
○ [ahmed@localhost Terraform-Project]$
```

- Internal Load Balancer:

The screenshot displays the AWS Management Console for Load balancers. At the top, the navigation bar shows the AWS logo, a search bar, and the user's account information. The main heading is "Load balancers (1/2)". Below this, a table lists the load balancers:

Name	DNS name	State	VPC ID	Availability Zones	Type	Date created
External-LB	External-LB-1257828434.us...	Active	vpc-08d9713240a5ef91f	2 Availability Zones	application	April 13, 2025, 05:00 (UTC+02:00)
Internal-LB	internal-internal-LB-19999...	Active	vpc-08d9713240a5ef91f	2 Availability Zones	application	April 13, 2025, 05:00 (UTC+02:00)

Below the table, the configuration for the "Internal-LB" is shown. It includes a diagram with the following components:

- Listeners (1):** HTTP:80, 1 rule.
- Rules (1):** Priority default, Forward to target group. Conditions (if): If no other rule applies.
- Target groups (1):** Instance Internal-Target-Group, 2 targets.
- Targets (2):** i-07f8098885e18e529 (Port 80, Healthy), i-09c62113282739ce2 (Port 80, Healthy).

- External Load Balancer:

The screenshot displays the AWS Management Console for Load balancers. At the top, the navigation bar shows the AWS logo, a search bar, and the user's account information. The main heading is "Load balancers (1/2)". Below this, a table lists the load balancers:

Name	DNS name	State	VPC ID	Availability Zones	Type	Date created
External-LB	External-LB-1257828434.us...	Active	vpc-08d9713240a5ef91f	2 Availability Zones	application	April 13, 2025, 05:00 (UTC+02:00)
Internal-LB	internal-internal-LB-19999...	Active	vpc-08d9713240a5ef91f	2 Availability Zones	application	April 13, 2025, 05:00 (UTC+02:00)

Below the table, the configuration for the "External-LB" is shown. It includes a diagram with the following components:

- Listeners (1):** HTTP:80, 1 rule.
- Rules (1):** Priority default, Forward to target group. Conditions (if): If no other rule applies.
- Target groups (1):** Instance External-Target-Group, 2 targets.
- Targets (2):** i-0012e54f139ed4382 (Port 80, Healthy), i-088ab8f2dc7f01d80 (Port 80, Healthy).

- Saving Public IPs in all-IPs.txt:

```
[ahmed@servmanager Terraform_Project-AWS]$ cat all-IPs.txt
"public-1 44.202.50.171"
"public-2 3.83.117.67"
[ahmed@servmanager Terraform_Project-AWS]$ █
```

- Backend Bucket (in S3):

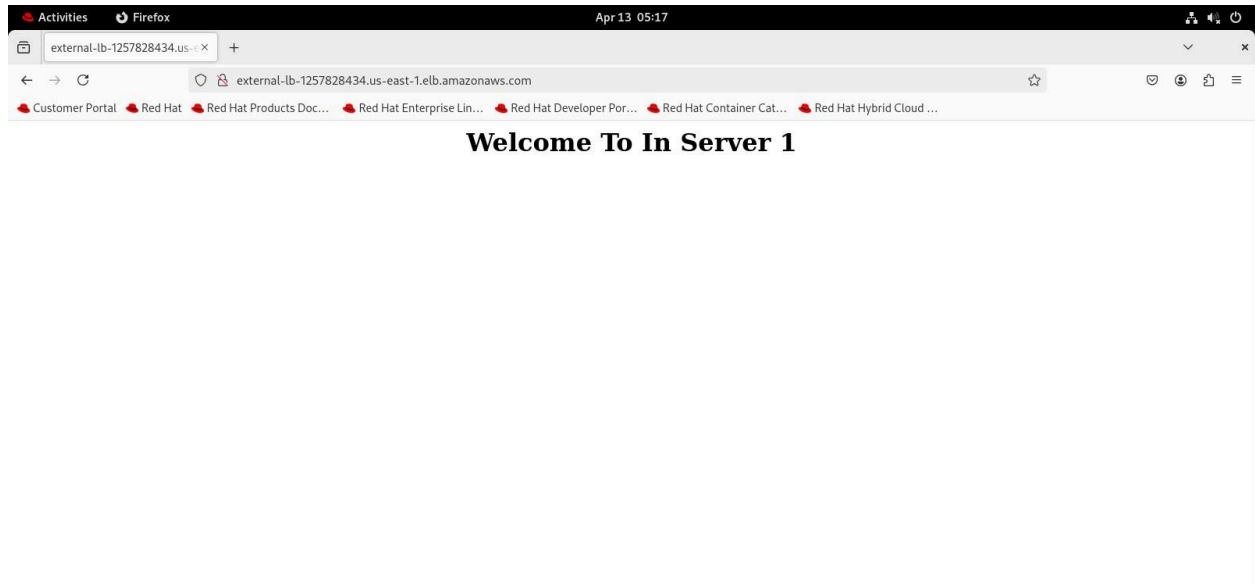

The screenshot shows the AWS Management Console for the 'Amazon S3' service. The left-hand navigation pane lists various S3 features. The main area displays an 'Account snapshot' and a table of 'General purpose buckets'. The table has columns for Name, AWS Region, IAM Access Analyzer, and Creation date. A single bucket named 'backend2terraform-project' is listed in the 'us-east-1' region.

Name	AWS Region	IAM Access Analyzer	Creation date
backend2terraform-project	US East (N. Virginia) us-east-1	View analyzer for us-east-1	April 13, 2025, 02:55:56 (UTC+02:00)

- Response of EX-LB (1):

The screenshot shows a web browser window with the address bar displaying 'external-lb-1257828434.us-east-1.elb.amazonaws.com'. The page content is a simple text-based response that reads 'Welcome To In Server 2'. The browser's taskbar at the bottom shows several open tabs related to Red Hat documentation and products.

- **Response of EX-LB (2):**
